

Rain Water Harvesting Project

Venue: Shivaji Mahavidyalaya Gadchiroli

Planners:- RWH Planning Committee.

Objectives of the Project:

01. To increase ground water level.
02. To maintain ground water level at summer in the college premises.
03. To make awareness about water conservation and preservation.

Brief Report:

The Rainwater Harvesting Project is installed in the college premises. To conserve and preserve the water is the need of time. In most of the region in all over the world in summer season face the problems of drinking water. So it is necessary to preserve the drinking water. Though our region is in better condition in summer season, but we maintained Rainwater Harvesting Project. In front of Hostel Building and near YCMOU Building the project is installed, roof water is collected from these two building in the project pit which is specially made for the project and water level maintained in the ground.

Project Outcomes:

Our students got aware about water conservation and mechanism of Rainwater Harvesting Project. Water level in ground is increased and we don't face any problem of water even in summer season.
