**In**

**Collaboration with**

**Institute of Advanced Studies, Pune**

An opportunity for e-learning has been created by the ongoing pandemic and lockdown, along with the availability of efficient technology. Webinars have filled in the lacunae of the learning process. The pandemic has brought online learning to the forefront. In these challenging times, technology has helped students continue with their preparation for competitive exams. With institutes shutting down temporarily, online learning became the only way for aspirants to learn and prepare for their exams.

It offered every student the front seat where aspirants could access and learn from expert faculty in interactive virtual classrooms with ease from their home. The rise of education technology and the proliferation of smart devices coupled with the democratisation of the internet will fasten this process ensuring more students can avail the benefits of online learning. With technology as the backbone, we can create the ‘Real Global Classroom’ – where students irrespective of their geographical location, school infrastructure, proficiency levels, etc will be able to access quality education through integrated learning platforms.

The interactive and mentoring session was organized on 09-05-2021

The webinar was organized with following objectives:

The purpose of competitive exams after B.Sc. in Chemistry or Physics is not only to judge students’ talent but also to test their management and planning skills. The whole concept of any competitive exams is based on strategic thinking and smart work.
